Will you have Ken send Joe and I the Chickletts for those boxes?

FYI below in case we need to be responsible for reporting the results.

This might be a case in point of why it is important to use the email boxes even though it is difficult to move over to it (I'm guilty). I would suggest that the Data Team frequent the EUL, the REOC PSC and the REOC ESC email boxes to stay in touch with developing issues (sampling directions/suggestions/planning). And we could add a Data Team email box if that will help.

Rich, please remember to utilize or at least cc your R6 REOC EUL email box on all emails. The names in the response positions will change during the response but the email boxes wont.

Eric, the SMART assessment is in it's infancy but growing up very fast. You should be able to search the Info box for related discussions. Paige said that she cc everything to the R6 REOC PSC email, so that may be the best place to search for SMART as it is developing.

I understand they are analyzing the dispersant. Maybe we could get a sample of it from them? Or somewhere else if you know how?

Rick, The Las Vegas lab contact person is Tammy Jones-Lepp. The address is 944 E. Harmon Ave., Las Vegas, NV 89119. Her phone number is 702-798-2144. They would like clean containers without preservatives. Also, they would like both the source oil samples and the weathered oil samples with a minimum of 5 mil. Thanks.
